done by design

SOUTHWATER TELFORD

DONE BY DESIGN

For more than 20 years, Stonepave, as part of the outHaus Group, has been a provider of hard landscaping solutions to local authority, commercial and domestic markets across the globe. But we're more than just providers.

Our keen eye for an item's quality and design means that we're proud to call ourselves curators of the best hard landscaping products available worldwide.

Whether it's offering a one-stop design showcase for our products internationally, or taking a leading role in designing your own particular project, the art and craft of design is one of our company's cornerstones.

In terms of the products detailed over the following pages, we specialise in all types of natural stone, clay, concrete and cast hard landscaping materials. We also provide a full range of bedding, jointing and product maintenance solutions.

We hold large quantities of stock in depots throughout Ireland and the UK, and closely monitor each product we sell from order through to delivery.

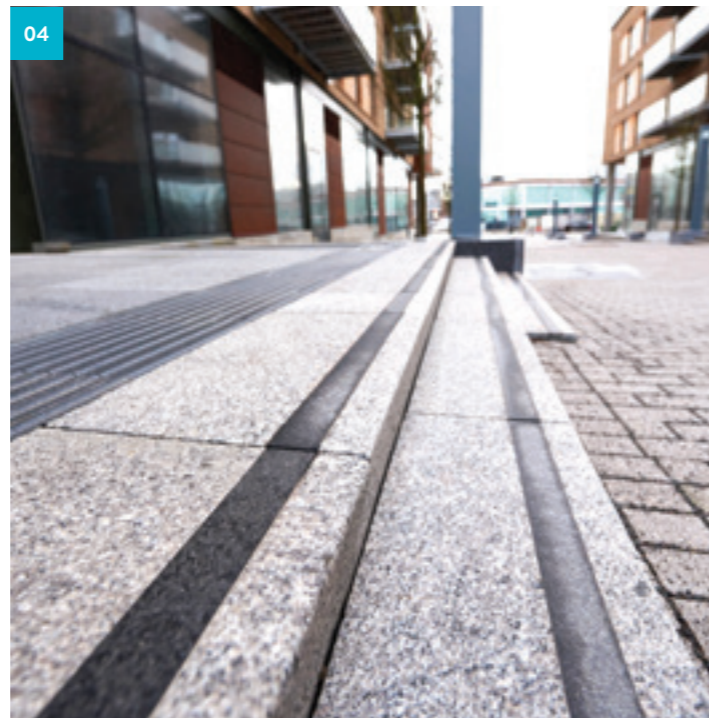

As well as curating the highest quality products, we also offer a full, in-house CAD landscaping design service that can develop and tailor your project, its products and its aesthetics. From outline design, including free consultation and project callout, right through to installation and handover, we'll ensure that your finished project suits its individual environment quite literally down to the ground.

We are committed to ethical global trading. We visit all potential quarries, factories and offices to ensure that the welfare of the workers and the conditions they work in are of the highest possible standard.

OUR PRODUCTS

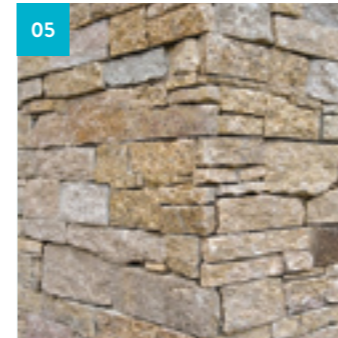

ALL OF OUR PRODUCTS ARE AVAILABLE
IN ANY OF OUR MATERIAL TYPES, MADE TO
SIZE WITH A MULTITUDE OF FINISHES.

We photograph our projects in all weather conditions. We also wait 2-3 years to take our photography - ensuring our work has time to settle.

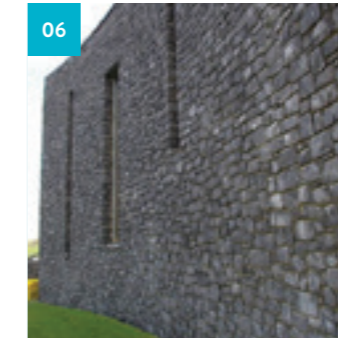

5. CLADDING

Brings a different dimension to facing brick or concrete blocks. Used to dress buildings and other vertical structures.

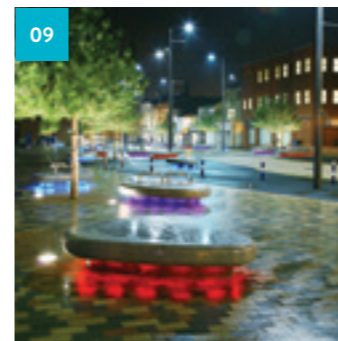

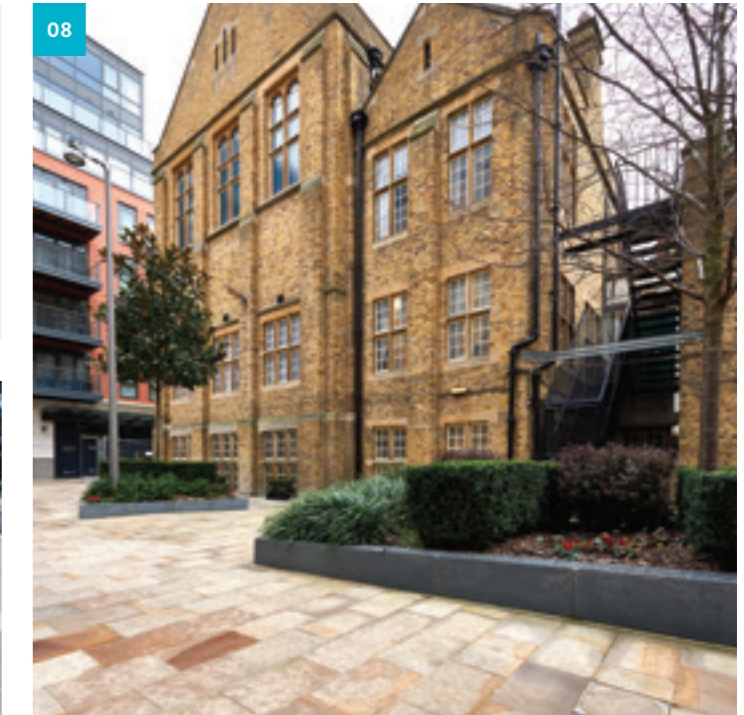

6. BUILDING STONE

Used to face buildings, boundary walls, feature walls, retaining walls, decorative beds and much more. Available in random and fixed modules.

7. COPINGS & PLINTHS

Copings or wall cappings are used to finish off tops of walled structures. Various shapes and designs can make these unique or non-uniform. Plinths at the base of a structure can enhance a building or wall.

1. PAVING SLABS & FLAGS

Most commonly used for exterior surfacing. The normal finish is sawn sides with textured tops.

2. SETTS, CUBES & COBBLES

Small paving formats used to feature big and small areas. Can be laid in all types of patterns and design.

3. KERBS

Used for shaping and retaining footpath outlines and marking edges of traffic and pedestrian paved areas. Also used to delineate bedded areas.

4. STEPS

We can produce steps to suit any dimensional requirements. These can be manufactured with contrasting strips in accordance with relevant regulations. Available in straight and radius profiles.

9. STREET FURNITURE & FEATURES

From urban landscapes to commercial developments, practical or aesthetic street furniture and features will enhance the architectural unity of a location.

10. BUILDING FEATURES

Cills, heads, surrounds, quoins, porticos and feature pillars all can add both structurally and aesthetically to all types of buildings and their surrounding environment.

11. BESPOKE ITEMS

Simply put: if you can draw it, we can make it!

12. ENGRAVING

Designs and lettering can be applied to all product types using a variety of methods and mediums, including sandblasting, rebating and water jet cutting to accept stainless steel, resin and contrasting coloured material inlays. The scope of this technology is relatively limitless and can include logos and designs.

OUR MATERIALS

HERE IS JUST A TASTE OF SOME OF OUR MATERIALS.

GRANITE

European & Far Eastern Sourced

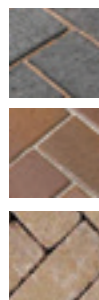

Granite is an igneous rock which has cooled slowly, allowing distinctive crystal patterns to form.

Most granites consist of three minerals which can be easily distinguished:

- Quartz: a clear or greyish 'glassy' mineral
- Mica: a soft black mineral which splits into thin flakes
- Feldspar: a mineral which occurs in a range of colours

From off whites and silvers to black, reds, blues and greens, the choice of colour in granite is endless. Available in a variety of size and finish such as flamed, fine picked, honed, polished, chiselled, sawn and rough punched. A single piece of granite can be transformed to suit individual requirements and design needs.

CLAY

European Sourced

Clay is shaped and then fired in ovens to provide the very hard and durable unit that stands the test of time.

The origin of the clay itself determines colour, which ranges from cream to very dark brown, with the majority of bricks a reddish colour. Firing temperatures can also influence brick colour.

Clay is a popular choice for its qualities of colour retention, unmatched durability and strength, design options and low maintenance.

LIMESTONE

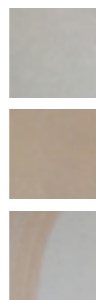

European & Far Eastern Sourced

Limestone is a sedimentary rock composed largely of mineral calcite, the balance being made up by silica, flint, sand and clay.

The primary source of calcite is most commonly marine organisms. Limestone is quarried from places which, millions of years ago, would have formed the floor of a shallow area of the sea. Limestone is formed close to the earth's surface and captures fossilised plant and animal life.

Hard limestone will accept a high gloss polished, honed or flamed finish. With striking tones such as whites, beiges, blues and browns, limestone creates a tough yet refined surface that appeals to all construction applications wishing to blend durability with style.

YORKSTONE

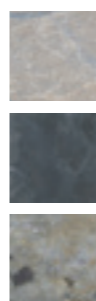

British Sourced

Yorkstone is a term for a variety of sandstone, specifically from quarries in Yorkshire which have been worked since medieval times.

Yorkstone is a tight-grained, Carboniferous sedimentary rock. The stone consists of quartz, mica, feldspar, clay and iron oxides. The colour of Yorkstone depends on the minerals within its makeup and differs throughout the quarries from which it is mined. We also source sandstone from other locations globally.

SLATE

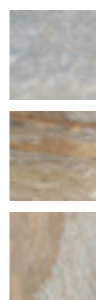

European & Far Eastern Sourced

Slate has been used as a hard landscaping product for centuries. Its laminar nature makes it easy to cleave and work.

Combining slate with other materials emphasises the qualities and attractiveness of both. Slate can be used effectively to form a break band in larger areas of natural stone. The dark, neutral tones of the slate accentuate the warmer colours of the feldspars and quartzes in the granite.

Slate is available in a range of colours, finishes and sizes and can look equally effective when used as paving, banding or even as part of a water feature with a unique effect.

QUARTZITE

European & Far Eastern Sourced

Quartzite is much harder than its parent rock, sandstone. It is formed from quartz sandstone that has come into contact with deeply buried magmas which change its state through heat and pressure.

Quartzite is a very strong stone but is usually not found in large bodies suitable for quarrying. Colours range from silvery grey with hints of green, pink and red through to a shimmering black. All have a distinctive sparkle from the tightly interlocking grains of quartz contained within.

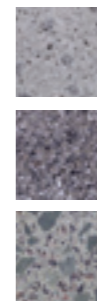

CAST STONE

European Sourced

Cast Stone is a concrete masonry product simulating natural cut stone. It is used in architectural and bespoke landscaping applications, is available in a multitude of colours and textures, and is ideal for feature paving application.

CONCRETE

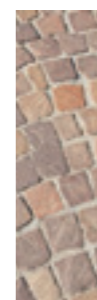

European Sourced

Our concrete hard landscaping products are manufactured to very precise standards, with many quality controls to ensure production of a high-quality product.

One of these controls requires that the raw materials (including graded aggregates, Portland cement, water, colouring pigments, and usually admixtures) are accurately proportioned. Available in a multitude of colours, textures and finishes.

PORPHYRY

European & Far Eastern Sourced

This volcanic rock is formed during a slow cooling process of igneous material, giving it high compressive strength and density.

The use of Porphyry as a hard landscaping material dates back as far as Babylonian times and has had a long tradition of use throughout Europe. Indeed, Porphyry was the preferred paving stone for the famous Roman roads.

With its warm earth tones of grey, brown, rust, buff and violets, Porphyry is a unique combination of natural beauty and durability.

BEDDING & MORTARS

European Sourced

We offer mortars for bedding, bonding and jointing which combine to form systems that meet hard landscaping design's every need.

SEALANTS & CLEANERS

European Sourced

A comprehensive range of cleaning and sealing products and services that solve a host of issues with natural stone, concrete and tiles for both internal and external applications. Supply and install options available.
